

REMARKS/ARGUMENTS

Currently in the case, after amendment, claims 1 - 25 are pending while claims 10-12, 14 and 17-20 are "objected to" with claims 1-9, 13, 15 and 16 being rejected, claims 21 & 22 having not been rejected (and therefore, due to the status of claim 1 is believed to be "objected to" as set forth below) and new claims 23-25 awaiting examination and believed to be allowable.

This Amendment responds to the aforementioned Office Action, wherein the claims as originally presented were rejected under Title 35 of United States Code, §§102 & 103. The Examiner's remarks have been carefully considered and, in view of the cited art, the claims which have amended to more particularly point out the distinctly claimed what Applicants regard as the subject matter of this present invention, it is sincerely believed that the claims which remain in the instant case patentably distinguish over all the prior art references. It is respectfully requested that this Application be re-examined in view of the following remarks, that the rejections be withdrawn, and that allowable subject matter be identified.

The points raised by the Examiner in the written office action will be responded to in the order they were discussed by the Examiner in the Office Action.

A copy of the Zakiev reference is supplied. This reference was acknowledged in related cases (including one by the Examiner in this case) and this reference was not deliberately withheld.

Under the section headed "Double Patenting" the Examiner noted the similarities in claims 1-20 to claims 1-20 earlier filed. Attorney for Applicant has studied the claims which were (recently) finally allowed in Application No. 10/392,657 and the claims in the instant application have been amended so that they are unlike the claims in Application No. 10/392,657 either as filed or as allowed.

With regard to the drawing changes, the comment as to Figure 10 is believed to be a missing element, rather than the numeral 63, which should be 65. The other changes have been made and are included as markups and replacement sheets.

Next, on page 4, the Examiner rejected claim 1-6, 8, 9, 13, 15 and 16 as being anticipated by U.S. Patent No. 5,975,714.

All of the claims 1-20 have been amended and are believed to distinguish over Vetorino.

Also on page 4, sandwiched between a statement of 35 U.S.C. §103 and a rejection of claim 7, is a statement about joint inventors. This case does not name joint inventors and it is believed that this paragraph is in error.

As to claim 7, its dependency is also altered and it is too believed to be in condition for allowance.

CLAIMS 21 & 22

Claims 21 and 22 were not rejected, and were originally dependent upon claim 1. Due to the lack of allowability of claim 1 as originally submitted, it was assumed that claims 21 and 22 were allowable subject to an "objected to" status. Consequently, these claims have been amended to independent form based upon this assumption. It is believed that claims 21 & 22, which have not been rejected, are in condition for allowance.

New claims 23-25 depend from other claims in the case and are believed to be in condition for allowance both by dependency and in their own right.

AGAIN, none of the claims remaining in the case are exactly like the claims in other cases.

Attorney for applicant hopes that the submitted drawings amendments are accepted so that the formal drawings may be submitted with a response to the issue fee statement.

The rejections under §§112, 102, & 103 having been explained, met and overcome, claims 2, 3, & 5 - 24 are currently in condition for allowance, and an indication of such is respectfully solicited.

Applicant requests reconsideration and ultimate allowability of all aspects of the case, including all of claims 1 - 25. All of the remaining claims are allowable over the cited references.

The Examiner is invited to telephone Applicant's Attorney at

the number below between the hours of 1:00 p.m. and 6:00 p.m.
Eastern Standard Time, if such will advance this case.

Dated: July 5, 2004

Magneto-electric generator - based on travelling armature
within static toroidal stator

Patent Assignee: ZAKIEV G Z (ZAKI-I)

Inventor: ZAKIEV G Z

Number of Countries: 001 Number of Patents: 001

Patent Family:

SU 1830599	A1		3	H02K-035/02	

Abstract (Basic): SU 1830599 A

A generator producing electric power is designed for simplicity and efficiency with a toroidal stator (1) composed of two concentric rings (2) magnetised as a pair, N pole inside. Rotor (4), describing circular movement inside, carries winding (5) fed from slip contacts and acquires a N-S polarity so that it uses N-N repulsion to maintain movement. The power generated by cut lines of force is converted into conventional electrical output at the magnetic winding (3) placed at one part of the ring.

ADVANTAGE - The design offers simple construction, increased efficiency characteristics and cheap power. Bul.28/30.7.93
